<p>10. Contents <i>(General themes and descriptions, the accurate content may change)</i></p>	<p>Analytics has become the technology driver of this decade. Organizations employ various analytics tools to generate descriptive, prescriptive, and predictive insights from various data sources to make educated decisions. All of these analytics tools and their respective architectures and methodologies reside under the umbrella term business analytics (BA).</p> <p>BA combines data gathering, data storage, and knowledge management with analytics tools to present complex internal and competitive information to planners and decision makers. The strategic role of BA has become evident for many businesses since it enhances organizations' management decision-making capabilities. Thanks to a plethora of tools and methods, BA provides purposeful aggregation and consolidation of vast amounts of data from different sources that inform operational as well as strategic management decisions.</p> <p>This course covers three main phases of BA. The first phase (i.e., data gathering, data storage, and data consolidation) comprises data warehousing, data integration, as well as relational and multidimensional analytical processing. The second phase (i.e., knowledge discovery) concerns data mining to extract business knowledge from consolidated raw data. The third phase (i.e., knowledge sharing) encompasses visual analytics, business reporting, and dashboards. Further, to get familiar with BA tools and to get hands-on experience on the abovementioned topics, this course comprises several exercises for which students work with state-of-the-art and practical examples and analytics tools.</p>
